

inter-office communication

to: Chris Bowers, DSHWM, Central Office date: December 16, 1985
from: Bill Skowronski, DSHWM, NEDO *BS*
subject: GMC, Elyria - Fisher Body Part B - OHD 004 201 091 **FILED**

As you can see from the attached letter dated November 6, 1985 from GMC, the company does not intend to pursue a final Part B permit, but intends to close. Therefore, it does not appear worthwhile to do a review of this application and as we discussed on December 13, 1985, NEDO will just put this on permanent "HOLD".

Re: Part B Application Submittal
Fisher Guide Division, General Motors Corporation
Elyria, Ohio Plant - OHD004201091

Dear Mr. Carlisle:

Enclosed are two copies of the Part B Hazardous Waste Permit Application for the General Motors Corporation, Fisher Guide Division, Elyria plant, located at 1400 Lowell Street, Elyria, Ohio. This permit application is submitted pursuant to the Hazardous and Solid Waste Amendments of 1984, to the Resource Conservation and Recovery Act (RCRA), which require owners/operators of land disposal units to submit a Part B Application by November 8, 1985 in order to retain interim status.

This Part B Application reflects those TSD facilities at the Elyria plant as they currently exist. However, use of the three plant surface impoundments (land disposal units) will be discontinued by December 31, 1985, and the plant will then move to withdraw this Part B Application. In addition, the plant will pursue final closure of these units and all its other TSD facilities during 1986. Once closure of all existing TSD facilities is achieved the plant will then withdraw its interim status and commence operating as a generator. Fisher Guide, therefore does not require, and has no intention to pursue a final TSD permit.

It must be noted that the closure plan that forms part of this Part B Application reflects closure of the surface impoundments utilizing the Chemfix waste stabilization process. This closure option is predicated on a successful delisting of the Chemfix treated sludge. A petition for final exclusion was submitted to the U.S. EPA, Waste Identification Branch, on July 8, 1985. Fisher Guide is currently preparing a revised closure plan incorporating an alternate closure method in the event a final exclusion is not obtained. Nevertheless final closure of the impoundments will be achieved by October 31, 1986.

If there are any questions regarding this application, please contact Mr. Joseph P. Fannon, Fisher Guide Divisional Office, 313-578-3005.

Robert M. Bownes
Plant Manager
